Product description

Vortex extraction arms

Vortex arms are modern technological solutions in air pollution elimination, capturing contaminants directly at their source. Their innovative design features rotating bases, tubes made of smooth steel, a versatile suction cup nozzle with a functional handle, and an adjustable throttle for air flow control. Thanks to these features, **Vortex** arms have set new standards in ventilation.

- **Smooth steel** - minimizes flow resistance and reduces noise levels, while also preventing the buildup of contaminants.
- **External joints** - allow for easy adjustment without interrupting work.
- **Long-lasting performance** - Vortex arms are designed for continuous use, making them an ideal choice for high-demand environments.

Technical details

| Model | Standing |
|----------|----------|
| Reach | 3m |
| Diameter | 200mm |
| Nozzle | 350mm |

| | |
|------|-----------------------------|
| Flow | 1400-2100 m ³ /h |
|------|-----------------------------|
