Product description

Grinding station with lower and rear extraction

Grinding stations with extraction systems are professional tables designed to provide protection during intensive grinding in industrial conditions. They should be connected to a local ventilation system that expels contaminated air outside or to a specialized filtration device.

- **Interchangeable worktop:** Allows for easy adaptation to various tasks.
- **Dust drawers:** Help maintain cleanliness and order.
- **Foldable side shields:** Provide additional protection and configuration flexibility.
- **Extraction through the rear wall and worktop:** Increases the efficiency of removing dust and other pollutants.

Technical details

Flow	1500 m³/h
Max. load capacity	100 kg
Dust drawe	2 x 17 l
Dimensions	864 x 1150 x 800 mm
Weight	160 kg
