## Product description

The SPARTUS® 5000 welding positioner is ideally suited to work with very heavy components, where manual operation could be dangerous and require a lot of time. The device is controlled by buttons on the manual control panel, and the rotation is started by a foot switch. It is equipped with a brush system, it is possible to connect the mass of the welding machine directly to the body of the positioner.

Advantages:

- smooth regulation of rotation speed and selection of the direction of rotation
- automatic, stepless adjustment of the disc tilt angle
- reading the current speed
- emergency stop - safety button on the control panel

- current load in the 60% cycle 300A.

## Technical details

Load capacity	5000kg
Plate diameter	1200 mm
Rotation speed	0,09 - 0,9 r/min
Manual table tilt	90° / 130°
Input	~3× 400V ± 10% 50 / 60 Hz
Weight	1200kg
